UNITY GLOBAL CARE INC. AND PACSANA
FORGE STRATEGIC PARTNERSHIP TO DELIVER
PROACTIVE, DATA-DRIVEN HOME CARE
FOR AGING ADULTS

PRESS RELEASE

FOR IMMEDIATE RELEASE

ALBERTai and PacSana’s SmartSolution Join Forces to Help Home Care Agencies Detect Risk Earlier, Improve Client Outcomes, and Scale Compassionate Care

Flemington NJ, May 13, 2026: Unity Global Care, the developer of ALBERTai - an AI-powered aging intelligence platform and ecosystem - today announced a strategic partnership with PacSana, the innovative remote care technology company behind the SmartSolution for Safely Aging in Place. Together, the two companies will equip home care agencies with an integrated, data-driven solution designed to deliver proactive, continuous care for aging adults living independently at home.

The partnership arrives at a critical inflection point for the home care industry. More than 63 million seniors currently receive professional home care in the United States, and 87% of adults 65 and older prefer to remain in their own homes as they age. With projected home care spending expected to reach \$275 billion by 2030 and 10,000 Americans turning 65 every single day,

agencies are under extraordinary and growing pressure to meet surging demand with resources that have not kept pace. The caregiving workforce is stretched, families are overwhelmed, and the existing model of reactive, fragmented care is no longer sufficient to address the scale and complexity of the aging crisis now unfolding across the country and around the world.

Combining Two Powerful Platforms Into One Proactive Care Solution

At the heart of the partnership is the integration of Unity Global Care's ALBERTai intelligence platform - powered by its proprietary Aging-in-Place Score® (AIP Score) - with PacSana's SmartSolution, a remote care platform built around a custom-designed smart wearable bracelet engineered specifically for older adults. PacSana's Smart Band features a 365-day battery life, full waterproofing for 24/7 wearability, and requires no smartphone, making it uniquely suited for continuous, passive monitoring of aging adults in the comfort and privacy of their own homes.

The device captures a comprehensive and clinically meaningful picture of daily living. It tracks Active Minutes, recording the movement associated with Activities of Daily Living such as dressing and washing, both inside and outside the home. It monitors Gait Speed - the speed of movement - which is a clinically validated measure of frailty proven to correlate with fall risk, cognitive function, and the ability to manage daily activities independently.

It records Exercise Minutes, distinguishing moderate to vigorous physical activity from general movement and tracking this both indoors and outdoors. The Smart Band also provides Sleep Insights, capturing total sleep duration and bed exits as a proxy for nighttime bathroom visits - a critical indicator given that approximately 50% of older adults experience poor sleep. In addition, the platform delivers real-time alerts for fall detection, nighttime wandering, alert button activation, and bracelet removal, providing families and care teams with immediate, actionable notification when it matters most.

This rich, continuous behavioral data feeds directly into Unity Global Care's ALBERTai intelligence layer, where it is synthesized alongside caregiver observations, family engagement inputs, and agency operational data to generate the Aging-in-Place Score – a unified and validated, predictive metric that tells home care agencies and families what is changing, why it matters, and what action to take next. The AIP Score is holistic by design, integrating functional wellbeing, care team influence, and environmental safety into a single interpretable signal. It is predictive rather than reactive, identifying early risk trajectories before a crisis occurs. It learns from longitudinal trends over time rather than relying on point-in-time snapshots, and it translates complex, multi-source data into clear, actionable guidance for agencies, caregivers, and families alike.

From Reactive to Proactive: A New Standard of Care

The combined solution enables home care agencies to move decisively from reactive to proactive care delivery - detecting early indicators of decline, fall risk, or changing health status before a crisis occurs and before a family reaches a breaking point. Through Unity's real-time Care Dashboard, agencies can visualize the stability of every client across their full census using a color-coded priority system. Clients flagged green indicate a stable condition requiring no immediate intervention. Those flagged yellow signal that moderate attention is needed. Those flagged red require immediate action. Detailed insights accompany each change in score, explaining the underlying reasons so that care teams can respond with speed, confidence, and purpose. ALBERTai further provides AI-driven care plan recommendations that can be reviewed and shared directly with families and key contacts.

The partnership also strengthens the referral relationships that are the lifeblood of home care agency growth. Hospitals, rehabilitation facilities, and healthcare partners increasingly demand evidence that clients discharged home remain visible, monitored, and supported. Through ALBERTai's

structured reporting suite - including Client Stability Reports, Aging-in-Place Score Trend Reports, High Risk Client Alert Reports, Fall Risk and Safety Monitoring Reports, Post-Discharge Monitoring Reports, and Caregiver Observation Summaries - agencies can demonstrate measurable, documented oversight that builds trust and reinforces referral partnerships over time.

For home care agencies, the partnership translates directly into earlier risk identification through continuous passive behavioral monitoring, improved client retention through proactive and visible oversight, stronger referral relationships through shareable and structured client trend data, greater operational efficiency through AI-driven prioritization and workflow support, and a meaningful competitive differentiator in an increasingly demanding marketplace.

David S. DuPlay, Co-Founder and Chief Executive Officer of Unity Global Care Inc., stated: *"The mission of Unity Global Care has always been to change the way the world ages - not with good intentions alone, but with real intelligence, real data, and real action. Our partnership with PacSana is a powerful step forward in that mission. PacSana has built something genuinely remarkable: a wearable device designed from the ground up for older adults that captures the kind of continuous, meaningful behavioral data that ALBERTai was built to transform into insight. Together, we are giving home care agencies the ability to see what was previously invisible - the subtle but critical changes in how an aging adult moves, sleeps, and lives day to day - and to act on those signals before a fall, a hospitalization, or a loss of independence occurs. This is not simply a technology integration. This is a commitment to the families, caregivers, and agencies on the front lines of the aging crisis, and to the aging adults who deserve to live with dignity, safety, and independence in the place they love most: home."*

Feargal Duignan, Founder and Chief Executive Officer of PacSana commented: *"PacSana was built on a simple but powerful conviction: that independence for seniors, peace of mind for families, and data-driven care for providers are not competing goals - they are the same goal, achieved together. We designed every element of our SmartSolution to meet older adults where they are, with technology that is effortless to wear, simple to deploy, and rich in the kind of behavioral data that truly matters clinically and operationally. Partnering with Unity Global Care and ALBERTai takes everything we have built to an entirely new level. By integrating our continuous monitoring capabilities into Unity's intelligence ecosystem, we are giving home care agencies something they have never had before: a complete, living picture of their clients' wellbeing - and the predictive intelligence to act on it proactively. This is the future of home care, and we are proud to be building it together."*

A Shared Vision for the Future of Home Care

The Unity Global Care and PacSana partnership is designed for immediate deployment within home care agencies and national franchise networks, with a scalable model that can grow alongside agency census. PacSana's SmartSolution is already serving customers across major U.S. home care franchise networks, with adoption spanning more than 60 offices since its May 2025 launch. The platform is fully compliant with HIPAA, EU GDPR, UK GDPR, FCC, CE, ISO27001, and a comprehensive suite of international product safety and data security standards, making it ready for deployment not only across the United States but in international markets as well.

Unity Global Care's ALBERTai ecosystem provides the intelligence infrastructure, referral reporting suite, and operational coordination layer that enables agencies to translate continuous behavioral data into demonstrably better outcomes for clients, stronger trust with referral partners, and sustainable competitive advantage in a rapidly evolving market.

Guided by a distinguished Medical Advisory Board that includes Dr. Thomas M. Gill of Yale University and Dr. Sara J. Czaja of Weill Cornell Medicine, Unity Global Care brings both clinical credibility and entrepreneurial vision to this partnership.

Together, Unity Global Care and PacSana are committed to helping home care agencies not only meet the demands of today's aging crisis — but lead through it with clarity, compassion, and intelligence.

About Unity Global Care Inc.

Unity Global Care is the developer of ALBERTai, an AI-powered aging intelligence platform and ecosystem purpose-built for the home care industry. Anchored by the proprietary and patent pending Aging-in-Place Score® (AIP Score), ALBERTai transforms fragmented caregiver observations, client assessments, family engagement, and operational data into predictive insights and coordinated action. Unity Global Care's integrated ecosystem includes AI-driven operational tools, recruitment infrastructure, referral relationship reporting, a B2C-to-B2B client acquisition engine, and the All Things Aging Marketplace.
